

Introduction to HTML

Basic Lecture Slides

What is HTML?

- HTML stands for Hyper Text Markup Language
- Standard language used to create web pages
- Defines the structure of a webpage
- HTML is a markup language (not programming)
- A **markup language** is used to **structure, format, and present content** (especially documents/web pages).
- A **programming language** is used to **create programs/software** by writing **logic and instructions**.

Why HTML is Important?

- HTML is the foundation of web development
- Provides headings, paragraphs, images, links, etc.
- Works with CSS for styling
- Works with JavaScript for interactivity

HTML File Extension

- HTML files are saved with: .html or .htm
- Examples: index.html, home.html

Basic Structure of HTML Document

- `<!DOCTYPE html>` defines HTML5
- `<html>` root element
- `<head>` contains page info (title, meta, CSS links)
- `<body>` contains visible content

HTML Tags and Elements

- HTML uses tags to create content
- Opening tag + content + closing tag = element
- Example: `<p>Hello World</p>`

Common HTML Tags

- Headings: <h1> to <h6>
- Paragraph: <p>
- Line break:

- Horizontal line: <hr>

Links in HTML

- Links are created using `<a>` tag
- Example: `<a href='https://www.google.com'>Open Google</a>`
- href attribute contains the URL

Images in HTML

- Images inserted using `<img>` tag
- Example: `<img src='image.jpg' alt='My Image' width='200'>`
- src: image path, alt: alternative text

Lists in HTML

- Ordered list (numbers): `<ol> <li>...</li> </ol>`
- Unordered list (bullets): `<ul> <li>...</li> </ul>`

HTML Attributes

- Attributes give extra information to tags
- Example: `<p style='color:red;'>This is red text</p>`
- Common attributes: href, src, alt, style, id, class

HTML Comments

- Comments are not displayed in the browser
- Syntax: `<!-- This is a comment -->`

Summary

- HTML builds the structure of web pages
- Uses tags like `<h1>`, `<p>`, `<a>`, `<img>`
- HTML + CSS + JavaScript = complete website
- Practice is important to learn HTML
